Depth	Scale	Sample	Graphic log	Drill action		Lithologic description
						This well was augered much more easily than the first (CLK01AB) because of the clutch adjustment giving more down hole pressure.
5						
						Core driven at bottom of hole using 1.5" diameter x 18" barrell (no liner). Core driven 1.3' w/ ~200 blows. Hammer was also used to dislodge barrel for retrieval. Approx 1.3' of 'undisturbed' material remained in sampler.
10						
15						
				Top 18		Core represents 18.90 - 20.2 depth interval.
20						green-gray, sandy silt (saved in separate sample bag)
				12		
25			CORE			brown silty sand ~~cut mcr~~ - looks like weathered version of underlying sand. Fewer cemented clasts. (saved in sample bag)
				6		
						green-gray pebbly sand, partly cemented med to fine sand (saved in sample bag)
				0 Bottom		

Summary log

This well is located 4 ft north of CLK-01A

Lithology is identical to that in CLK-01A B

water level	1635
24.50	Hold
4.75	cut
19.75	
2.00	MP (approx)
17.75	BL LSD

Depth (sanded)

24.50	Hold
3.60	missing end
20.90	
2.00	MP
18.90	depth BL LSD
